

spectar+

INDUSTRY'S MOST COMPREHENSIVE PLATFORM FOR MULTI-
SCREEN OTT, IPTV AND HYBRID DVB SERVICES

PLATFORM TECHNICAL SPECIFICATION

December 2022

ABOUT US

More Screens is a privately held company whose offices are located across several EU countries. The company has been operating since 2011. Through a network of employees and partners, located all around the EU, More Screens specialises in IPTV/OTT Multi-Screen platform product development and related services.

We provide technology product, planning and technical services, as well as strategic planning for use of technology and consulting in strategic system design.

More Screens is made up of professionals who have extensive background working with service providers, telecom operators and broadcasters. Our goal is to provide you with **the most innovative and cost effective Multi-Screen IPTV/OTT service delivery platform for your business needs.**

Among our customers: Digitalb, Telecom Italia, Deutsche Telekom (Makedonski Telekom, Crnogorski Telekom, Hrvatski Telekom), Turk Telekom, Telekom Srbije, Telekom Slovenije, Eronet, BH Telecom, RTS, Moviemix, Gley, Media Broadcast Satellite, Zmones Cinema...

COMPETITIVE ADVANTAGE

- A true End to End IPTV/OTT system with over 90% of ecosystem components built and engineered in house.
- Proven, mature and tested product deployed by known operators (in all scenarios) and used by millions of users.
- Supports IPTV/OTT/HYBRID DVB B2C and B2B HOTEL TV and BUSINESS TV on the same platform
- State of the Art service user interface providing attractive and user friendly service
- Can be integrated with almost any external 3rd party or legacy ecosystem component such as BSS/OSS, Headend, Monitoring system, CDN..
- Local and online 24/7 support team facilitating fast response to any inconvenience or customer's requirement.

Thank you,

Predrag Mandlbaum
CEO, More Screens

SOFTWARE

- Spectar+ Service Delivery Platform
- Analytics
- CDN
- DRM & CAS
- Customer care
- Hotel & Business TV
- Device Management System
- Monitoring & System Alarming
- Diagnostic & KPI

SPECTAR+ BRINGS YOU ONE STEP AHEAD OF YOUR

CENTRALISED APPROACH

With the Spectar+, we are proud to offer an entirely new Multi-Screen Video Service Delivery Platform that enables centralised service and ecosystem components management, distribution and monetisation of Linear TV and VOD assets on multiple platforms and devices, over Public or Managed network.

CARRIER-GRADE RELIABILITY

Spectar+ is feature-rich and easy to use. It provides operators with the ability to setup, offer and deliver any kind of Video over IP service more quickly with less effort than competing solutions. Spectar+ provides true carrier-grade reliability and scale, which operators need to deliver the service to potentially millions of service subscribers.

OPENESS

The flexible architecture of this technologically leading platform offers entirely new capabilities. Spectar+ runs as a virtual platform and **is deployable entirely independent from any specific underlying application or hardware**. Discover and use the modules and API's to build requirements-based services delivered online through the public or a managed network. The platform facilitates management activities through a user-friendly web browser interface.

Spectar+ implements a Service Oriented Architecture and thus consists of various Web services that provide for Application Layer (Front-End Client Apps). This technologically leading architecture offers any and all options on scalability, availability, security, and integration ability.

FEATURE-RICH AND EASY TO DEPLOY

Service and content providers increasingly demand **usability, compatibility, performance, and scalability** when deploying Video over IP services on multiple platforms and devices.

Spectar+ meets these demands through its integrated revolutionary management tools and features.

We have successfully created a powerful and highly effective Multi-Screen video service delivery framework which includes a versatile set of platform components, features and client apps.

DESIGNED FOR HIGH AVAILABILITY

Spectar+ runs on a hybrid cloud solution designed to support usage peaks and geo-redundancy. It's architecture combines different virtualisation technologies and models.

Using this approach we created high-availability hosting cloud that provides performance and scalability. Spectar+ application stack is divided into several blocks and each block is isolated inside virtualisation container.

A following image shows Spectar's 4-Tier stack. In production environments, minimum 3 clustered containers for each Tier are needed.

Availability encompasses reliability, recovery, our key benefits:

- Cache servers
- DNS geographical load balancing
- DNS automatic failover

Redundant server structure

- Application servers
- Application automatic workload balancing
- Automatic failover
- High Availability
- Redundancy

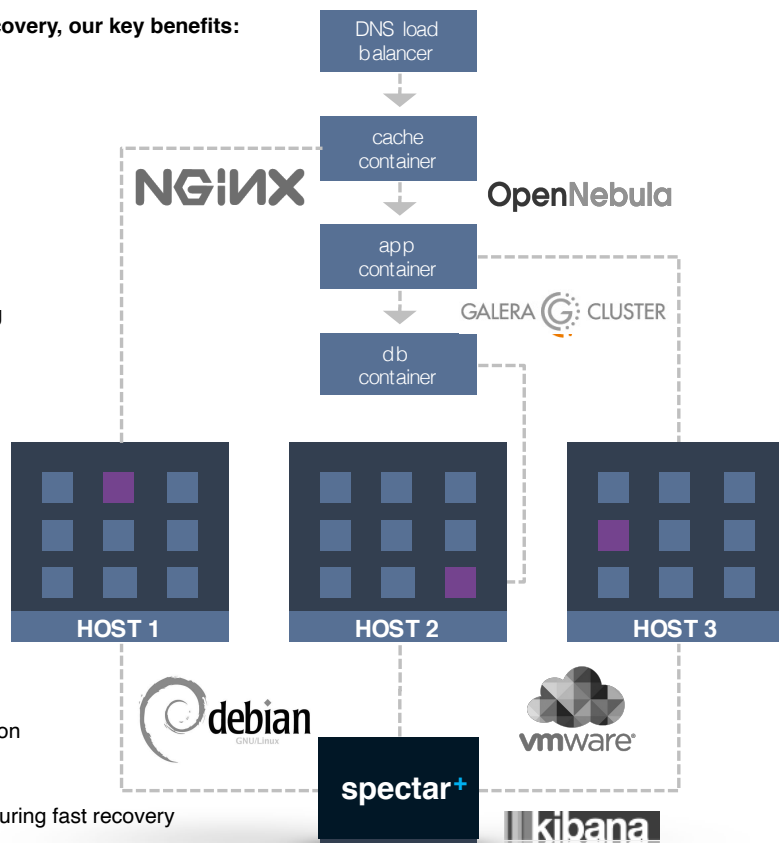

Database servers

- High Availability in multi-master mode
- Synchronous multi-master replication
- Redundancy

Management server

- Centralized monitoring of complete solution
- Configuration/deployment management
- Periodic platform disk-based backups insuring fast recovery

Spectar+ platform can be deployed in full geo-redundant solution.

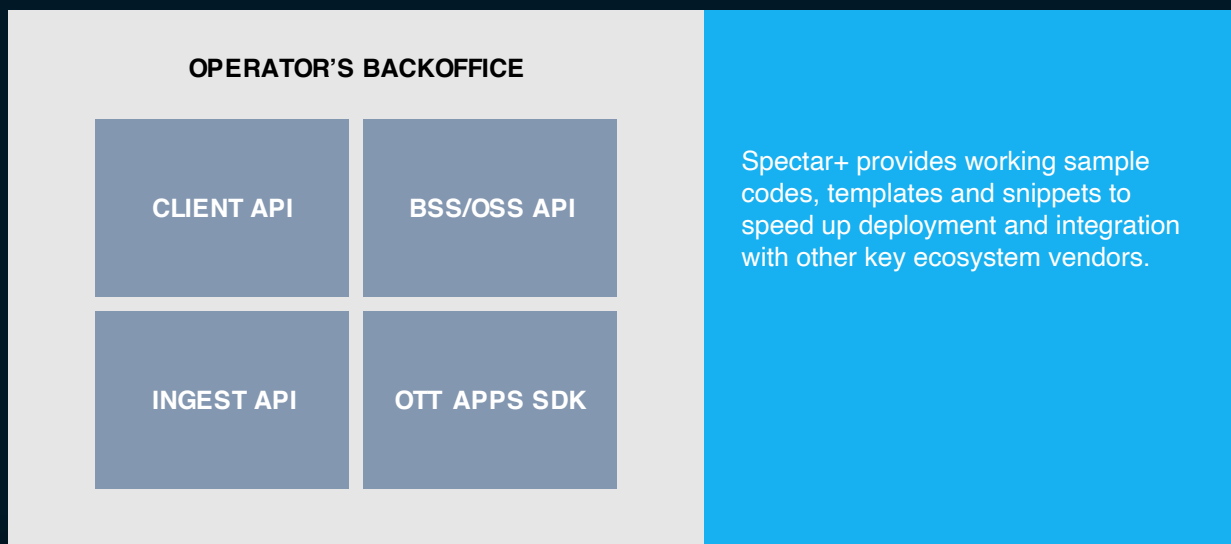

INTEGRATES WITH EXISTING LEGACY OR ANY OTHER THIRD PARTY SYSTEM

Spectar+ provides a set of API (Application Programming Interface) together with an SDK (Software Development Kit) and all related documentation. The goal of this API is to provide direct, high-level access to the data contained in the Spectar+.

Client programs can use the API to authenticate, get services and post changes. Output from the API is available in a wide range of formats, including JSON, XML, YAML and PHP's native serialisation format.

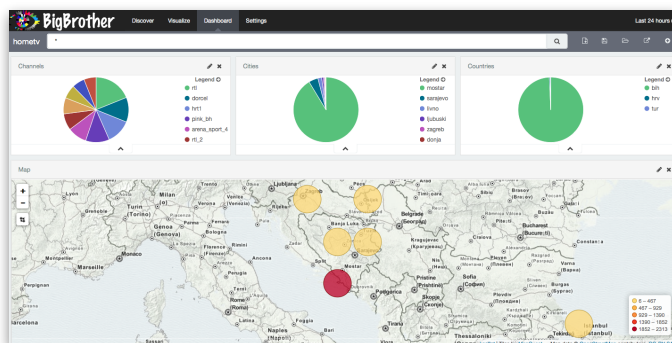

Spectar+ API's allows for easy integration with existing CRM / OSS / BSS systems, Recommendation systems, nPVR, CDN, STB's or any other connected device.

COMES UP WITH ANALYTICS AND MONITORING TOOLS

Get quick and detailed insight that helps better understand user behaviours, reactions and attitudes to your platform services.

- Powerful web-based analytics & reporting tool
 - Customizable and user defined criteria's
 - Number of views, channel views
 - Watching time by video and channel asset – start/stop time
 - Top videos, channels, shows
 - Total number of platform customers
 - Filter by location, region, time range, channel
 - Visitor - Player interaction analytics
 - Number of account/client connections, concurrency, type of connected devices
 - Detailed information report of IPTV/OTT TV service usage (daily, weekly, monthly, yearly)
 - Real time dashboard reports of service activity (TV channel usage, service unavailability, etc.)
 - Report generator with integration possibility
 - Reporting data of customer care complaints
 - Centralized log management (system, application, client log) with definable severity levels
- Usability and stability reporting. **Other metrics can be deployed on request. (.*)**

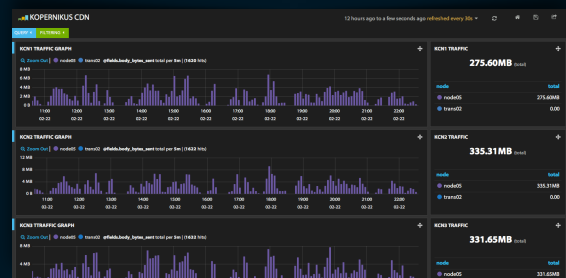

elasticsearch. kibana

INTEGRATED CONTENT DELIVERY NETWORK MANAGEMENT

The principle of a CDN (Content Delivery Network) relies on the distribution of cost-effective caching servers in the network capable of serving popular content from a location closer to the end-users.

The popularity of content is computed in each regional point of presence (POP), based on the number of times it is requested in a given timeframe. When a threshold is reached, the content is kept in the POP and streamed from there to the end-users who request it.

This allows operator to keep only the traffic for non-popular content in the backbone network, thus greatly optimising network usage by reducing the costs related to the deployment of the equipment and ensuring a great Quality of service and User experience.

MS-CDN®, our new CDN management tool can centrally manage origin and edge servers, streams caching and routing, to ensure scalability and quality of your service.

More Screen's CDN solution's key benefits are:

- flexible configuration suited to meet many scenarios
- multiple models of setup
- multi-tier support
- node specific task/process assignment (i.e. for live, catchup, VOD, combinations...)
- client's geo location awareness when choosing the best delivery route
- geo-redundancy for a node or for geo location
- secure-token mechanism support (adds another level of content protection, now on CDN)
- deployment on standard servers

CDN analytics collection and presentation together with other analytics elements collected from the Spectar+ platform and devices itself

KEEPS YOUR CONTENT SECURE BY ADOPTING MULTIPLE DRM & CAS SCHEMES

Digital rights management (DRM) is a systematic approach to copyright protection for digital media. The purpose of DRM is to prevent unauthorised redistribution of digital media and restrict the ways consumers can copy content they've purchased.

Typically DRM is implemented by embedding code that prevents copying, specifies a time period in which the content can be accessed or limits the number of devices the media can be installed on.

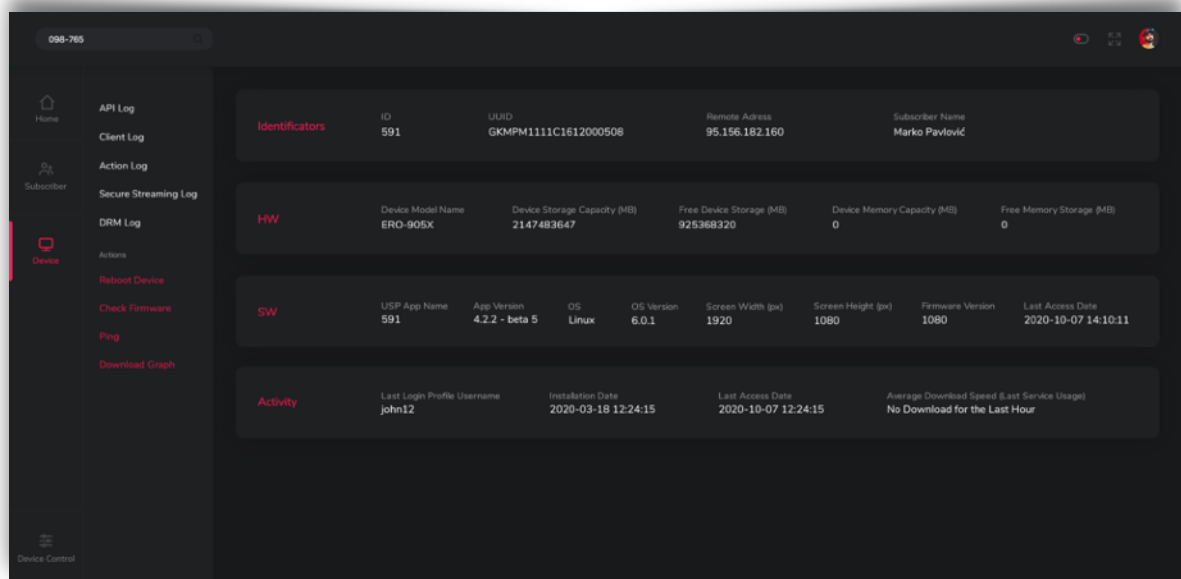

WE ARE CERTIFIED LICENSING AND IMPLEMENTATION SERVICES PROVIDER FOR THE MOST USED DRM TECHNOLOGIES TODAY.

IMPROVES CUSTOMER RETENTION WITH INTEGRATED CUSTOMER CARE MODULE

With **Customer care module** help desk and support teams can easily manage consumer requests and offer prompt support to the service subscribers.

Its advanced features (universal search, real-time statistics, device health & diagnostics , network conditions, service availability, available subscription packages, etc.) allow your contact center team to perform a wide variety of activities on a single platform without involving technical or commercial departments.

SUPPORTS ANY BUSINESS MODEL

Spectar+ supports all popular models of platform monetisations out-of-the-box!

Monetise your platform on Subscription (SVOD), Transactional (TVOD) or Pay per View (PPV) as well as Video Ad-Supported (AVOD) model, or a combination of all.

Apart from these, Spectar+ integrates to your own Billing system or payment gateway and supports multiple currencies, as well as features like Coupon Codes, access to the service with or without subscription, etc, allowing you to have complete control over the way you want to monetise your platform.

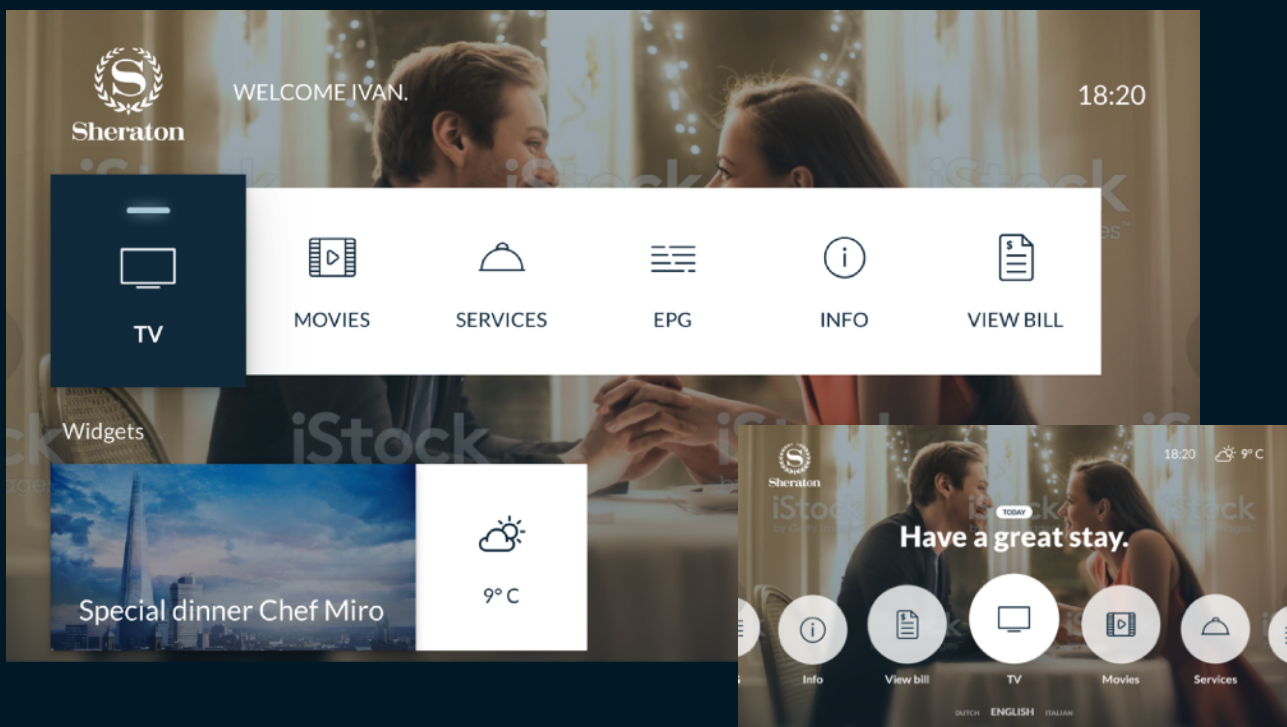

Its powerful **Subscription management module** allows you to Group your subscribers, Create product bundles, Channel packages, Assign type and allowed number of devices and sessions for each subscriber and combine these to create a unique experience for every wish of the customer.

NOT ONLY B2C, HOTEL AND BUSINESS TV B2B IS ALSO AVAILABLE

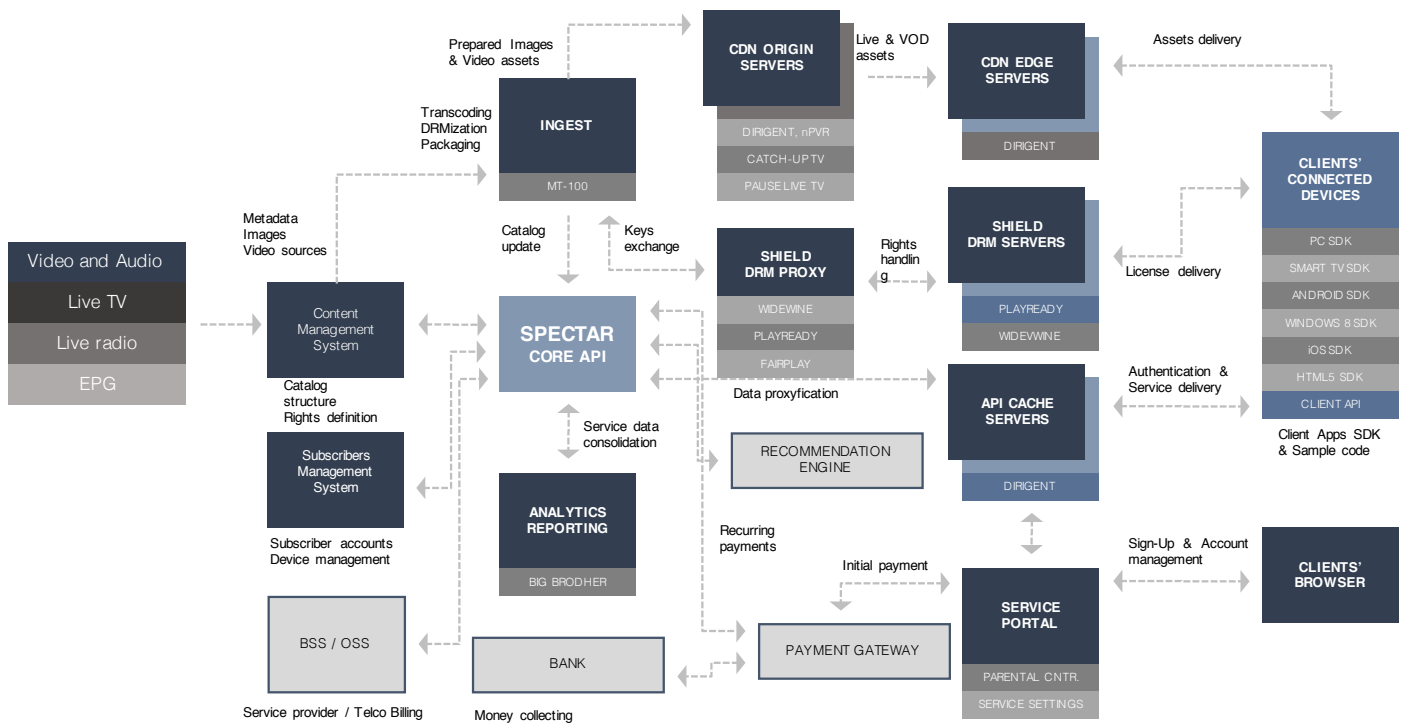

Thanks to Hotel TV mode which is offered as an add-on to existing Spectar+ installation, operators are now able to offer new TV services to Hotels, Arenas, Hospitals, Bars, Restaurants and Shops.

Hotel TV is new television service designed for the hotel and hospitality sector, capable of being integrated with hotels' management applications. This solution makes it possible to present personalised content to guests and implement digital marketing strategies during their stay.

Among its many benefits, Hotel TV makes it possible to programme a reception with welcome messages, adapt languages and content, and buy products and services directly via the television in the room. Hotel TV works on both Android STB and Samsung Hospitality TV devices, LG and Philips hospitality devices support is planned for the 2023.

SPECTAR+ REFERENCE ARCHITECTURE

MULTIPLE DEPLOYMENT & PRICING OPTIONS

Spectar+ offers several deployment and pricing options, including both [On-premises](#) and [Cloud-based software-as-a service \(SaaS\)](#) provided by us or accredited partners, as well as a combination of the two with hybrid solutions.

Whichever be your preference; deployment options provide the freedom to choose exactly the right option for the project. In any of the deployment options, Spectar+ delivers a proven, scalable, flexible Video Service Delivery platform. Followed by the dedicated support, with the possibility for 24/7 emergency contact and guaranteed response times.

Pricing

Services plans pricing vary, depending on the scope of your project and the choice of deployment. Every project is unique, so we work with you to precisely detail what your project requires, and go over your licensing and support options.

Please feel invited to find out how we can help. If you have any questions about services, we remain at your disposition for an informal chat.

OPERATOR'S DASHBOARD

ASSETS MANAGEMENT

VIDEO ON DEMAND

- Manual or automatic Ingest from Local or Remote VOD servers, watch folders
- Metadata import, export, editing
- Tags & Keywords management
- Automated publishing (availability and expiration)
- Censorship and rating management
- Credits management
- Thumbnails and posters management
- Subtitles & Audio language management
- Editions management (e.g. Trailer, SD / HD version, etc.)
- Licensing (DRM) management (.*)
- Geolock management
- Parental control Management
- Support the MRSS metadata specification: Direct importing of the metadata from content file or remote/uploaded MRSS files
- Easy and intuitive management
- Pricing (per view, subscription)
- Playback
- Asset Localization
- Advanced search and filtering options
- Automatic transcoding of ingested content into different streaming formats defined by the system operator (.*)
- The module provides some "batch actions" where an entire set of VODs can be changed. For example, you can delete, publish or unpublish selected VODs.
- Multi-language subtitles
- Multiple audio streams

AUDIO ON DEMAND

- Manual or automatic Ingest from Local or Remote AOD servers, watch folders
- Metadata import, export, editing
- Tags & Keywords management
- Automated publishing (availability and expiration)
- Credits management
- Censorship and rating management
- Thumbnails and posters management
- Licensing (DRM) management (.*)
- Geolock management
- Playback
- Asset Localization
- Pricing (per view, subscription)
- Parental control Management
- Advanced search and filtering options
- Automatic transcoding of ingested content into different streaming formats defined by the system operator (.*)

Spectar+ platform supports content ingest according to the CableLabs® Content 3.0 Specification / ADI. The CableLabs specification for packaging metadata and assets (movie, preview (trailer), box cover, poster, thumbnail, barker...) is issued to public and is considered to be a standard document of reference which has undergone rigorous member and vendor review in the industry, and as such is deemed to be suitable for use in production environments.

LINEAR TV & RADIO CHANNELS

- Metadata import, export, editing
- Tags & Keywords management
- User ratings management
- Linear TV and Radio channel expansion
- Channel localization
- Posters / Channel logo management
- Automated EPG Ingest
- Licensing (DRM) management
- Catch-Up TV / nPVR restrictions (.*)
- High Efficiency Video Coding (HEVC) video compression standard
- Geo-distribution restrictions
- Adaptive streaming
- Concurrent (parallel) streaming controller per device and/or user (subscriber)
- Blackout restrictions (.*)
- Blackout for certain period of time (changing live stream with some predefined image)
- API based control (real time blackout activation/deactivation).
- Promo feature per channel and package
- Pricing

EPG INGEST & EDITING

- EPG automatic or manual import from different EPG sources using XMLTV formats or dedicated web services
- EPG editing
- EPG update / source monitoring & alerting
- EPG system integration

EPG is able to show and filter following info about channel:

- channel name,
- channel type,
- channel number,
- nPVR/Catch-up TV icon and info about the shows,
- content name,
- content (show) start and end time,
- description,
- reminder icon (if reminder is set),
- nPVR/Catch-up TV icon (if show is enabled for nPVR and/or Catch-up),
- parental control rating,
- cast, credits, genre

Spectar+ platform manages live broadcasting channels in the same manner as VOD/AOD content with respect to metadata and delivery options. All channel information is managed according to the CableLabs® Content 3.0 Specification.

Additionally, for live broadcasting channels, EPG information can be ingested and bound to the channel in an automated process using standard XML format XMLTV and if required it may be extended to support other formats and systems to ingest from. After ingest, the EPG information can be managed manually in the system and is used as basis to perform many additional functions like "Stop and Watch", "Start Over TV", nPVR, Catch-up TV, etc. Spectar+ is streaming server agnostic. It means that almost any broadcast "source" can be formatted and packaged for a right platform / device.

For example: HLS streams with H.264 baseline for mobile devices or Hi-res HLS streams for STB.

EPG source is coming from 3rd party provider, supported format is XMLTV, if needed other ingest sources can be integrated. EPG is exported towards client applications (STB, Android devices, iOS devices, SMART TVs and STBs). All EPG fields are definable so there are no practical limitations regards to number of channels, maximum field length, or number of days

CATCH-UP TV (TIME SHIFTED TV)

- Manage Catch-Up TV servers
- Create Catch-Up TV assets based on provided EPG or time schedule
- Edit and Update Catch-Up TV assets operational and descriptive metadata
- Manage start/end broadcast time for each asset
- Monitoring & Alerting capabilities
- Automatic or manual publish of recordings / Catch-Up to VOD (.*)
- Advanced search and filtering options (search assets by TV/radio channel, Broadcast date/time, Title, Availability, etc...)
- Capacity management (The user shall be noted when capacity is used up),
- Catch-up TV blackout
- Manually configured
- Information from EPG.
- Custom features (Transfer to another TV channel when the time comes)
-

nPYR (RECORDINGS)

- (NPVR), or remote storage digital video recorder (RS-DVR) is a network-based digital video recorder (DVR) stored at the provider's central location rather than at the consumer's private home.
- Spectar+ features allow to:
 - Schedule recording general recordings can be scheduled/descheduled on OTT devices for NetPVR,
 - Schedule EPG based recording - schedule with default settings directly or with additional step when changing the default settings,
 - Schedule immediate recording within Live TV, EPG,
 - Schedule and perform multiple recordings at the same time,
 - Schedule serial recording within Live TV, EPG,
 - De-schedule recording within Live TV, EPG,
 - Access list of recordings via menu,
 - Automatic delete recording,
 - Delete single recordings,

Catch-Up TV module is used to control external recording component «Screens Capture» which is used for Catch-Up TV, Start Over and Pause Live TV services. «ScreensCap», provided by More Screens captures up to the live point and then continues capturing in real-time the fragments that become available from the Linear TV channels / streams. This allows for close to real-time publishing of Catch-Up content in all available broadcast formats: as soon as the show broadcasts the Catch-Up version is live as well. Operator can set Catch-Up TV duration for each linear channel (e.g. 48h, 72h, etc...), as well as store selected Catch-Up TV assets as a VOD items (Live to VOD).

Catch-Up/replay number of channels and Catch-up max days of recorded content is unlimited (in dependency with physical storage). The module provides some “batch actions” where an entire set of Catch-Up TV assets can be changed. For example, you can delete, publish or un-publish selected assets.

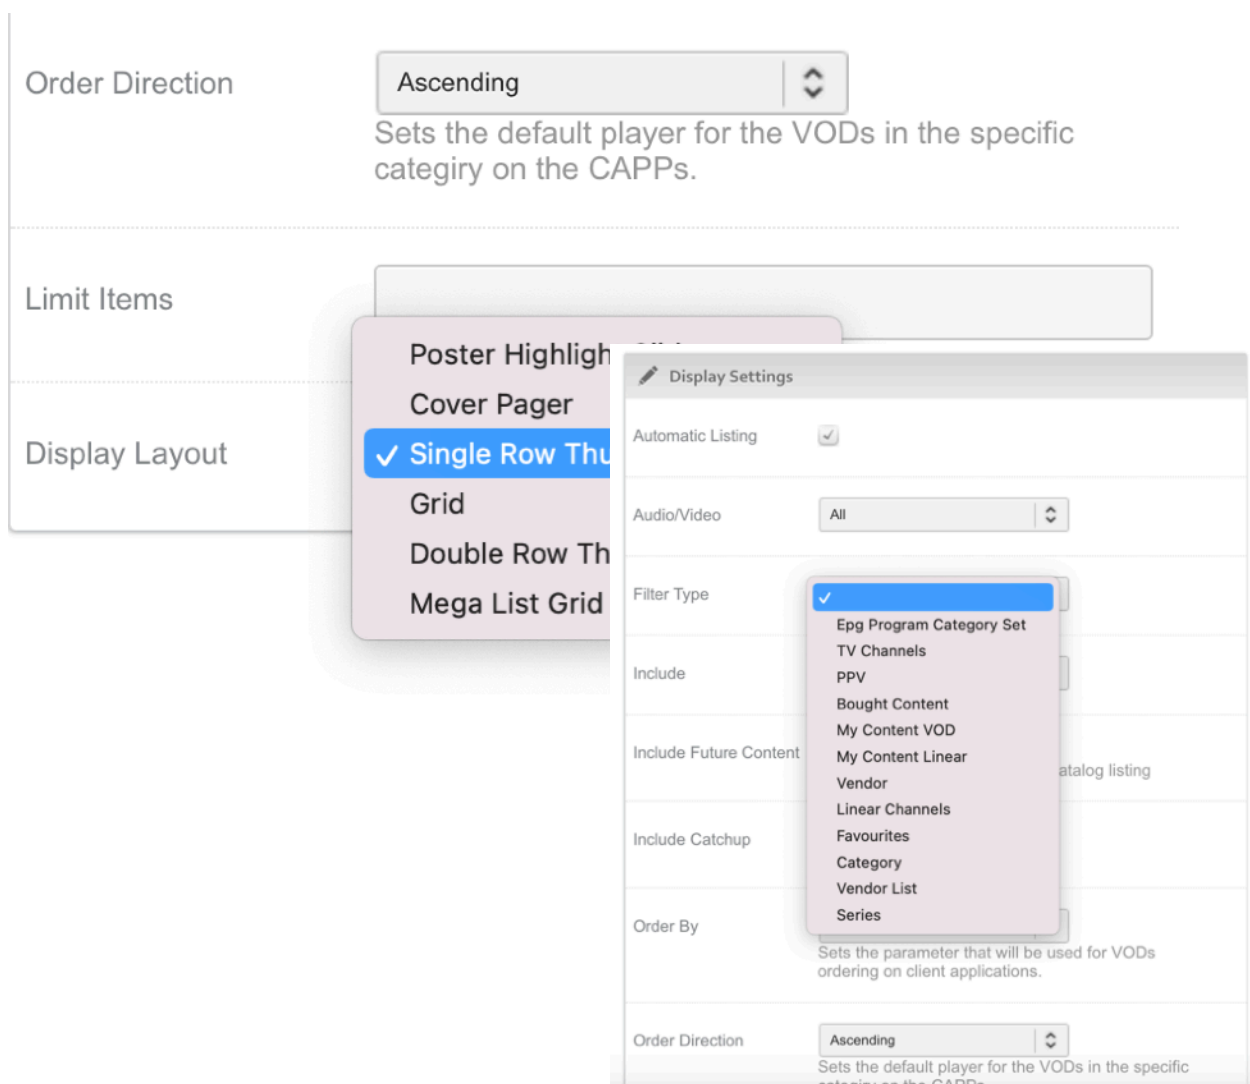

CMS AND CATALOG MANAGEMENT AUTOMATION

Catalog management ensures that the relevant assets are available to subscribers in an organised way. It involves categorising, listing, and organising the asset content descriptions which are hosted on the Spectar+. Catalog management is a strategic process to provide quality assets lists with appropriate descriptions that are aligned to match the required keywords.

Catalogs can consist of anything like Linear TV, Radio, VOD, AOD, Catch-Up TV, EPG etc., listed in an easy to navigate listings with different layout options.

Automate catalog listings in bulk with just a few clicks

Each Multi-screen platform today has its own set of templates, product formats and naming conventions. Editorial and marketing teams need to adhere to these guidelines individually, often leading to errors, delays in catalog uploads and longer time to market. Our Catalog management module helps automate this process & creates 'ready to upload' catalogs that can be pushed directly into platform feeds.

OPERATOR'S DASHBOARD

BUSINESS OPERATIONS

«Business Operations» component features several modules for facilitating subscriber provisioning and wholesale of services through retailers.

SUBSCRIBERS PROVISIONING & MANAGEMENT PRODUCTS & PRICING

- Add new subscriber with single or multiple sub profiles
- Edit-Update existing subscriber
- Deactivate – Delete subscriber
- Manage contacts and general information
- Individual subscriber restrictions (egg. Allowed number of user devices, Allowed number of Sub-profiles, Allowed number of parallel sessions)
- Manage purchase pin (for Pay Per View offerings)
- Manage type of subscriber (egg. Trial, Promotional, Regular...)
- Manage subscriber referral
- Add – Update type of subscription, packages and expiration
- Send personalized email notification
- Display Subscriber transactions
- Display and manage subscriber profiles (hierarchical account structure)
- Display and manage subscriber devices
- Advanced searching and filtering options (search subscriber per type of subscription, type of device, contact information, referral, expiration date, etc...)
- Subscribers provisioning and management module provides administration of subscriber accounts and service activation. The module provides some “massive actions” where an entire set of Subscribers can be changed. For example, you can «batch» delete selected subscribers.

- Create and manage service offerings by packaging Linear TV channel lineups and VOD / AOD assets
- Manage SVOD (Subscription VOD) offerings
- Manage TVOD (Transactional VOD) / Pay-per-view (PPV)
- Manage Apps offerings on the STB device
- Group service offerings into bundles

MULTI-TENANCY / RESELLERS

- Add, Update, View and Delete tenants
- Manage secure API token (for provisioning and billing integration)
- Manage and customise target devices branding and notifications

Multi-tenancy module is an additional module that enhances Spectar+ platform services by enabling resellers or virtual operators accounts structure. The system enables for selling services through network of service distributors/agent, which can provision their end-users themselves through the API interface, which is part of the module. The module architecture allows resellers to use their own billing system and branded Target device apps.

Thus, they become in fact virtual OTT providers based on one, central Spectar+ platform; with possibility to manage the service and integrate with own online payment processors (e.g., PayPal accounts).

OPERATOR'S DASHBOARD

SYSTEM CONTROL ROOM

«Business Operations» component features several modules for configuring and managing the Platform in general.

GENERAL PLATFORM SETTINGS

- Instance Set-Up
- Set default platform language
- Configure email notifications
- Configure terms & conditions
- Configure platform logo
- Configure platform favicon
- Configure UI branding
- Configure social networks apps
- Pre-test (beta testing) available

CLIENT APPS & TARGET DEVICES

- View and manage installed apps
- Manage branding options
- Localize apps (translation and language management)
- Set default player, distribution formats and protocol for each Client app
- Search and Filter apps per version, OS, device, subscriber, target device ...

PLATFORM ADMINS

- Manage operator accounts
- Manage roles and permissions
- Audit (view all operators activities)

SERVICES CONFIGURATION

- VoD / AoD / set Delivery protocol, set CDN
- Linear Channels / set Delivery protocols, set CDN
- Catch-Up TV / set Catch-Up TV recording time
- CMS / set default Content on client apps, default Unavailable content (message or vod)
- Subscribers / set default Currency, allow Self registration, set default Subscription Type and package for new subscribers
- Parental control / set Rating scheme, set default Rating for new subscribers(+18,+12 ..), set Parental control mode (pin or hide contents), enable Anonymous parental control, set default Rating for VOD, Allow turning off Parental control
- Client API / Enable - Disable Client API
- Watch folder / create Watch folders, set auto publish, set streaming formats
- EPG / set refresh time
- Secure streaming / set Token IP restrictions
- Statistics / set Google Analytics profile and related services
- User self-care and web portal / set Self devices management and restrictions, set Visible packages to users with customer branding
- Geolock / default content type / message, default Geolock Zone, set and manage new Geolock Zones, set and manage new IP addresses and Countries
- Push notifications / Enable-disable client notifications, set up iOS certificate file, set up Android API key, set up Windows RT security identifier, set default Notification period in minutes, set Expiration offset period in minutes, set Max retry count.

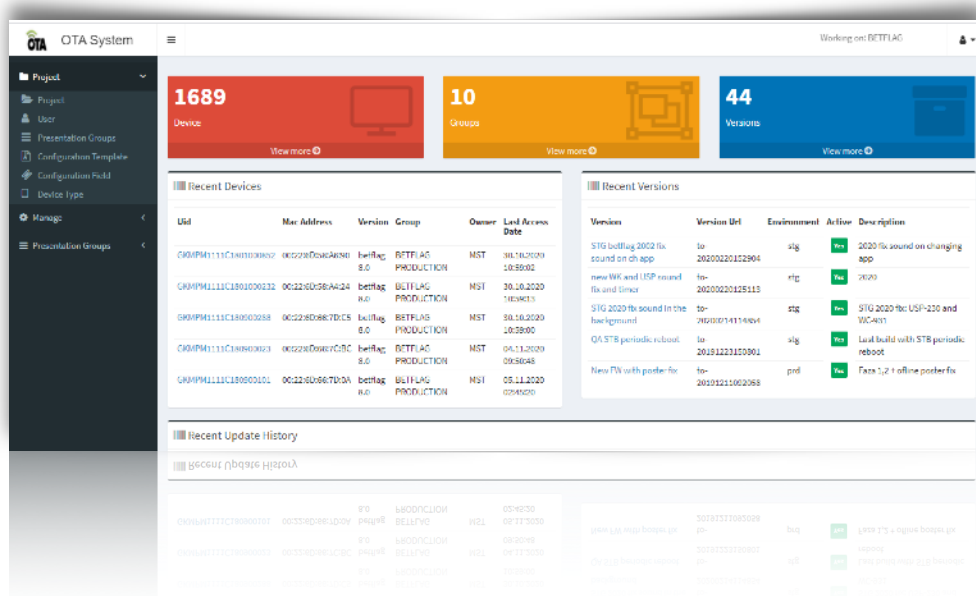

OPERATOR'S DASHBOARD

DEVICE MANAGEMENT SYSTEM

Device Management System support adding, updating, viewing and deleting the target devices that subscribers use to receive the service.

OTA (Over the Air Updates) is used for remote management and firmware updates of your STB devices. It consists of several modules able to manage STB firmware and apps distribution, schedule automatic updates, group STBs for different firmware releases and so on. Its multi tenancy capability provides you with a powerful tool to run virtual STB networks for different business needs.

- Add, Update, View and Delete target devices
- Display application version, installation date and last access date
- Display general info about the Target device: MAC address, Unique identifier, Operational System, Type of device (Smartphone, Smart TV, STB, etc..), Device model (egg. Huawei, Samsung, Nokia, iPhone...), Screen resolution, Available memory, Available storage, Operating system, Language, Time zone, Availability of Hardware video decoding.
- Connect device to subscriber account
- Advanced searching and filtering options
- Target devices
- Group devices
- Manage apps and firmware versions
- Schedule automatic updates
- Monitor status of updates

OPERATOR'S DASHBOARD

MONITORING AND SYSTEM ALARMING

We have selected Zabbix, a proven Open-source solution for monitoring servers, service and network platforms which are components in our solution.

Zabbix role is to aggregate all alarms and performance counters from all platforms and provide them as consolidated data to Operator's Umbrella monitoring platform.

We are happy to offer, if needed, complete customization of Zabbix platform to collect and aggregate all required data and send it to umbrella NMS platform. or commercial departments.

OPERATOR'S DASHBOARD

SECURITY POLICY

SECURITY POLICY These policies apply to platform administrative access, self-care service, client applications, web frontend, code, network, storage and web services.

List of policies:

- SSL (Secure Sockets Layer) between a server and a client
- Secure streaming tokens
- Secure streaming with obfuscated URL to media files
- AES-128 Content Encryption and protection
- Obfuscated code

OPERATOR'S DASHBOARD

DIAGNOSTIC AND KPI

A good understanding of the Quality of Service (QoS) is important for the service providers to be able to evaluate their OTT service. All client apps have possibility to collect diagnostic data and KPI data.

Spectar+ Client diagnostics component captures and collects system-related, subjective and user-oriented metrics from the Clients/Devices with following collection methods:

- Global configuration of client diagnostic data collection (diagnostic data collection from every client) with the set of configurable collected client diagnostic counters
- On demand snapshot from an individual client (diagnostic data collection from a selected client)

General diagnostics data

Following information is available for each Client/Device:

- Installed application name
- Installed application version
- UUID/MAC address
- Type of Application
- Device Model
- Subscriber
- Hardware video decoding option
- Screen Width (px) / Height (px)
- Last used login profile
- Installation date
- Last access date
- Push notification token
- Screen DPI X/Y
- Device Storage capacity
- Device Free Storage capacity
- Device Memory capacity
- Device Memory Free
- Running operational system (OS)
- Running OS version
- Time zone
- Time zone
- Last used login profile
- Installation date
- Last access date
- Push notification token

CLIENT APPS & DEVICES

WE ARE MARKET LEADER IN MULTISCREEN OPTIONS

Spectar+ enables delivery of video services to multiple devices, including PC/MAC, Set-top boxes, Smart phones, Tablets and Connected devices and offers "ready to customize" Client app's that allow service providers to deploy rapidly and efficiently.

All client apps use standardized API for communication with the platform so 3rd party apps can be easily integrated.

Client apps currently available on following platforms/devices:

- Set Top Box devices based on Android AOSP or Android TV
- WebTV Portal supported on most used browsers
- Smartphone (Android, iOS)
- Tablet (Android, iOS)
- AndroidTV
- FireTV
- Smart TV (Samsung Tizen)
- Smart TV (LG WebOS)
- Smart TV (HiSense VIDAA OS)
- HTML5 APP for 3rd part device integrations
- AppleTV
- RokuTV

•RDK – Currently under development. On the Roadmap for 2023

INTELLIGENT UNIVERSAL SEARCH

Search is the key feature of modern Multi-screen platforms. Scalability and the capability to handle large volumes of data in near real-time is a must. Today, autocomplete in search fields, search suggestions, location search, and faceted navigation are de facto standards in usability. This is where Intelligent search module comes in.

Incorporating a finely-tuned search function can dramatically improve user experience.

PUSH MESSAGING TO ANY DEVICE

The power of push messages / notifications is vast and only limited by your creativity.

Spectar's **"PUSH" module** allows you to send breaking news, events, deals and content promotions instantly to your subscribers. PUSH module supports delivery of messages on Mobile, PC, Smart TV and STB devices. You can easily set-up and schedule several types of messages according to predefined templates and rules.

Here's what we would consider to be the top benefits of push messaging:

Increased subscriber engagement

Push messaging gives you a way to reach subscribers quickly and easily, allowing them to take action and engage with your service.

Drive service usage

Consistent push messaging will help drive activity within your service app and keep subscribers engaged in your app experience.

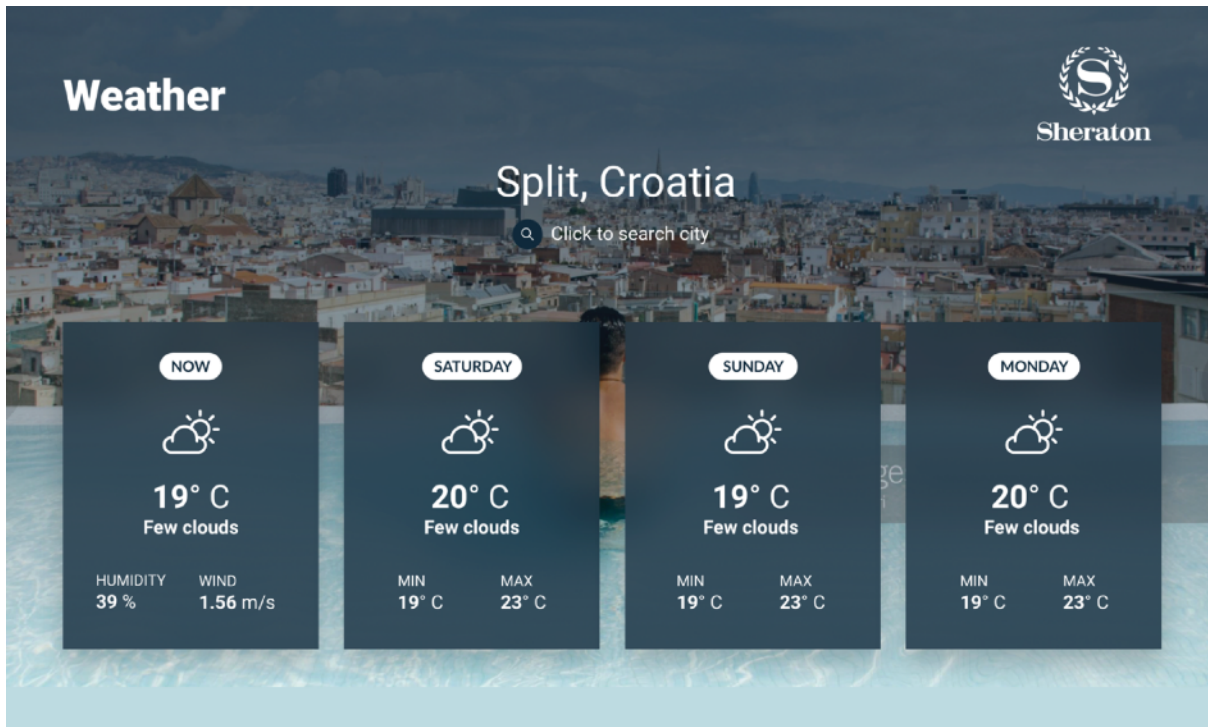

Relevant messaging

Push module allows you to segment your subscribers by gender, type of subscriber, geographical location, type of device. so you can send the right message at the right time to subscribers who are interested. Relevant messaging leads to increased loyalty, engagement and action.

THIRD PARTY WIDGETS

Any kind of Android App or HTML 5 application can be pre-installed on the STB device .
Apps and widgets such as YouTube, Weather, iTunes, Media center, Ted Talks...

Example of wether widget

Live match results widget in overlay mode during the Live broadcast.

Similar content

This image shows a movie player interface for the film 'Oblivion'. The background is a still from the movie showing two characters in a futuristic setting. The interface includes a top center arrow, the movie title, genre, year, duration, and rating. A synopsis is provided below. The director and cast are listed. A 'Gledaj' button is visible, and a 'Remove from my list' button with a heart icon is at the bottom. The text 'Similar content' is at the bottom left.

EXTENSIVE SUPPORT FOR DETAILED METADATA PRESENTATION

This screenshot shows a video player interface for the TV series 'The Witcher'. The background image features Geralt of Rivia standing in a dark, stone-walled environment. In the top right corner, the time '15:36' and the date 'Friday, 07.08.2020' are displayed. On the left side, there is a vertical navigation menu with icons for home, search, and other functions. Below the search icon, the text 'Recommended content' is visible. The main title 'The Witcher' is prominently displayed, followed by a row of metadata tags: 'TV Series', '2 Seasons', 'Fantasy', '2019', '13+', and 'FHD'. A descriptive paragraph reads: 'Geralt of Rivia, a solitary monster hunter, struggles to find his place in a world where people often prove more wicked than beasts.' A 'Play' button with a right-pointing arrow is located below the description. At the bottom of the player, a progress bar is visible with a red playhead.

This screenshot shows a video player interface for 'The Witcher', focusing on episode details. The background image shows Geralt of Rivia in a dark, ornate interior, holding a sword. In the top right corner, the time '15:36' and the date 'Friday, 07.08.2020' are displayed. The main title 'The Witcher' is at the top left, followed by the same metadata tags as the previous screenshot: 'TV Series', '2 Seasons', 'Fantasy', '2019', '13+', and 'FHD'. The description is identical: 'Geralt of Rivia, a solitary monster hunter, struggles to find his place in a world where people often prove more wicked than beasts.' Below the description, the creator 'Lauren Schmidt' and the cast 'Henry Cavill, Freya Allan, Anya Chalotra, Jodhi May, Björn Hlynur Haraldsson' are listed. A 'Play S01E01' button is visible, and a 'Episodes' button is highlighted with a white border and a right-pointing arrow. An 'Add to my list' button with a heart icon is also present. At the bottom, the text 'Similar content' is visible above a row of small thumbnail images for other media.

USP MIDDLEWARE & STB DEVICES

USP (UNIVERSAL STB PLATFORM) middleware by More Screens comes with built-in Launcher app, Device Set-up Wizard, OTA System Updater, Media player and powerful set of API's.

Since STB Middleware is based on newest WebKit release, it supports latest HTML5 technologies and provides a new platform for magnificent UIs, Hardware accelerated graphics and video as well as easy portability across different models of STB devices.

Media player is optimised for both IPTV Multicast and OTT Unicast video distribution.

STB MANUFACTURERS WE WORK WITH:

RECOMMENDED STB CONFIGURATIONS:

Hybrid Android TV/AOSP

A highly flexible UHD/4K, Android TV/AOSP based hybrid STB with multi format DVB front-end (DVB-C/S2/T2) & IP/OTT supporting various CA and DRMs.

Specification

SoC : AMLogic S905X2/X4 or Y series

OS : Android Pie Type : DVB-C/S2/T2

CAS : Verimatrix/CryptoGuard

DRM : Widevine L1 / Microsoft PlayReady 2.5

Memory : 2GB DDR3 Storage : 8GB eMMC

Integrated Native DVB-Stack / USP Middleware

Size : 120mm x 120mm x 25mm or 100mm x 100mm x 27mm

IP/OTT Android TV/AOSP

A highly flexible UHD/4K, Android TV/AOSP based IP/OTT set-top box supporting various DRMs with trendy and stylish GUI/Launcher

Based on ARM A53 / A55 SoC for the Android TV Universal Remote Control friendly, supports IR and BLE options

802.11ac Wi-Fi connectivity ensures high quality TV delivery without network cables.

Voice search enables you to find entertainment or get information quickly.

HEADEND

More Screens has independent systems integration services department with multivendor experience.

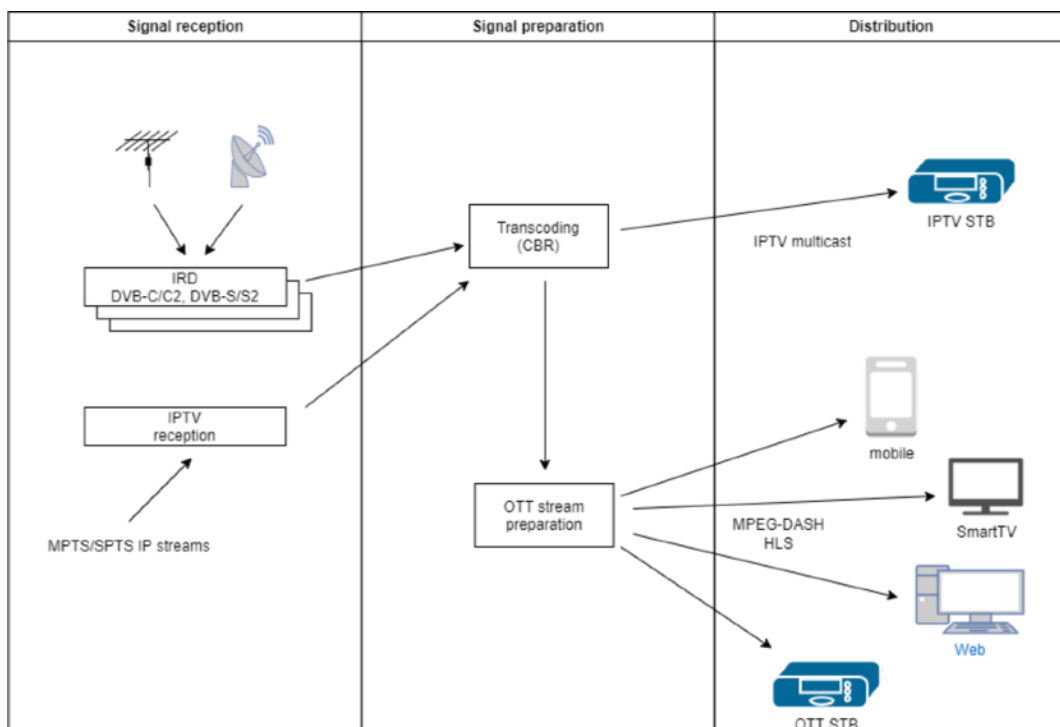

Based on the industry standard policy, mandatory and optional, we propose the system structure like shown on the next image.

If the whole system is build that way:

- **system is modular**
- **system is scalable**
- **system can be distributed over few sites, which can ensure the geographical redundancy for some critical components**
- **system can serve multiple types of customers, both IPTV and OTT**

The whole system relies on IP network beneath. Our assumption is that the network will be prepared accordingly by the operator. The detailed networking requirements shall be discussed.

One of the most important steps before implementation is to discuss the exact numbers and structure. This includes multiple sites installation with all details. Also a very important information which is needed to correctly dimension the receiving part of the system is to know number of satellites, satellite transponders, channel list on the reception side, number of terrestrial channels that must be inserted in the system, number of channels that will be received over IP etc.

IRD

On the receiving part we plan to install IRDs (DVB receivers) for DVB-S/S2 and DVB-T/T2 signals. These signals will be converted to IP and the output from IRDs will be fed to signal preparation phase. IRDs used here will be able to descramble incoming signals using modular CI based descrambling mechanisms.

The same will be done with signals received over IP. Both MPEG SPTS and MPTS received over IP network will be supported.

We have experience and references with following vendors:

•Appear TV®

•Harmonic ®

•Teracue ®

•Wisi®

LINEAR AND FILE BASED TRANSCODING

After signal reception phase the clear IP signals will come to the preparation phase.

As one of the required delivery mechanisms is IPTV distribution (multicast), all the signals coming to preparation phase will be transcoded to constant bitrate (CBR).

On the other side, the same signals need to be prepared for OTT based delivery. All the transcoding to multiple profiles and packaging is done in this phase.

In addition to that, enabling non-linear interactive services on linear channels like PLTV and CatchupTV are prepared in this phase.

Streams encryption (DRM), both for IPTV and OTT are also done in preparation phase.

So, there will be several outputs coming from preparation phase, i.e. streams prepared for IPTV multicast delivery, OTT delivery over DASH and/or HLS etc.

We have experience and references with following vendors:

• **Appear TV ®** • **MT-Live ®** product family which is manufactured by More Screens.

• **Harmonic ®** Designed from the ground up to integrate Video transcoding, CDN origin and DRM packaging in a 3-in-1 modular approach.

• **Piko TV®** Exceptional high density transcoding, up to **396 sd** or **132 hd** channels in single 2ru appliance. Out of the box implementation of time shift, catchup-tv and start over tv services.

• **Ateme ®**

After the streams have been prepared they are delivered to Operator's customers. IPTV multicast delivery will be used for customers connected to private Operator's network. The configuration of the network will be discussed with Operator's networking team. On the receiving side IPTV STBs will be used.

OTT distribution goes over public internet. This branch is meant to serve mobile customers, but also customers using OTT STBs, SmartTVs etc. These customers can reside on internal network also if needed.

MT-live

CONTENT INGEST, PROCESSING AND PACKAGING

 MORE SCREENS

HIGH-DENSITY VIDEO PROCESSING PLATFORM

MT-LIVE IS DESIGNED FOR SERVICE PROVIDERS WHO NEED RAPIDLY DEPLOY MEDIUM AND LARGE VIDEO HEADENDS WHILE CONTROLLING OPERATIONAL AND CAPITAL COSTS ALONG WITH MAXIMISING POWER EFFICIENCY.

DESIGNED FROM THE GROUND UP TO INTEGRATE VIDEO TRANSCODING, CDN ORIGIN AND DRM PACKAGING IN A 3-IN-1 MODULAR APPROACH.

EXCEPTIONAL HIGH DENSITY TRANSCODING, UP TO **396 SD **** OR **132 HD **** CHANNELS IN SINGLE 2RU APPLIANCE.

OUT OF THE BOX IMPLEMENTATION OF TIME SHIFT, CATCHUP-TV AND START OVER TV SERVICES .

COMPLETELY REDUNDANT SOLUTION WITHIN ITSELF, POSSIBILITY OF N+1 OR N+N SCENARIOS, HOT SWAPPABLE COMPONENTS FOR ZERO DOWN TIME MAINTENANCE.

MT-LIVE is a hardware based Video processing platform designed to address latency and poor scalability of Cloud transcoding infrastructure. Working with Intel Quick Sync Video technology, More Screens has created the optimal solution that addresses the issue of energy efficiency, scalability and cost, and results in a better user experience. **MT-LIVE** integrates switching, load balancing and processing in a 3-in-1 modular approach.

MT-LIVE supports multi-screen and multi-format transcoding and trans-rating of live H.264 SD/HD

and MPEG-2 SD/HD transport streams, DRM encryption and packaging. Thereby the user can set parameters like resolution, bitrate, bitrate type (CBR/VBR) or GOP structure (Group of Picture). Also the up- or down-scaling from HD to SD formats is supported.

**** BEST CASE SCENARIO**

3 IN 1 SINGLE 2RU APPLIANCE

PRODUCT HIGHLIGHTS

- Video recording capability in multiple formats
- DRM packaging
- Adaptable time shifted streams based on all transcoded streams
- Out of the box implementation of Recording, CatchupTV and Start Over TV services
- Option of integration with second tier storage for archiving or as 2nd tier storage
- Integrated CDN support without the need for additional Origin servers
- Designed from the ground up to integrate switching, load balancing and processing in a 3-in-1 modular approach
- Transcoding designed for IPTV / OTT, multiple outputs, multiple resolutions, subtitles, bitrates and formats
- Ideal for IPTV, Cable, Cloud and OTT service providers to introduce new applications used for mobile and fixed video services
- Exceptional high density transcoding, up to 396 SD or 132 HD channels in single 2RU appliance
- Industry leading power efficiency delivers significant OPEX savings
- Completely redundant solution within itself, possibility of N+1 or N+N scenarios, hot swappable components for zero down time maintenance

Switching infrastructure

2 hot swap switches: Active-Active or Active-Standby;
High uplink capacity up to 2x 10 GbE SFP+ (front or rear) and 8 x 1 GbE ports RJ-45 or 1x 40GbE QSFP+ Uplinks

Software

Load Balancing: Improves application responsiveness by distributing application workloads evenly across servers; Supports SSL Offload, Compression and HTTP Multiplexing, thus reducing latency, accelerating page loads and lowering bandwidth cost;
Supports virtualization management and for high availability environments;
VLB Basic and Advanced;

OS, Hypervisors and Middleware Support:
Various options available as part of integration services

CDN Support:
Advanced caching capabilities for CDN origination services

Video Player Support:
Integrated advanced HTML 5 Video player for both Web and Mobile browsers

DRM Support:
Microsoft Playready, Apple Fairplay, Google Widewine, AES 128, Verimatrix

Compliance / Regulatory

Designed to meet the following environmental, safety and EMC requirements: EN 300 019; Telcordia GR-63; Telcordia SR-3580 level 3; Telcordia GR-1089; EN 300 386; EN / CSA 60950-1; FCC PART 15

Video&Audio Formats Processing

AVC / H.264 (Baseline, Main, High)
HEVC / H.265
MPEG-2 (4:2:0, 4:2:2)
VC-1 (Simple, Main Advanced)
AAC
AC-3 (Dolby Digital)
MPEG-1 Layer 2
MP3
PCM
WMA
Profile range from 1920x1080p to 240x180p
Resolution conversion
Frame rate reduction
GOP alignment

Stream formats

IP: UDP, RTP, RTSP MPEG-TS, HLS, RTMP, ASF, MPEG-DASH
FILE: Transport Stream File, MP4, AVI, FLV

Hardware Platform

Ruggedized Modular Platform design:

- 2U height, 21 inches deep;
- Up to 9 hot-swappable subsystems;
- Up to 2 hot-swappable load balancers (optional);
- Single or redundant hot-swappable switches;
- Single or redundant management ports;
- Hot swap, redundant fans;
- Front to back cooling;
- Dual redundant 1100W AC or DC Hot Swap Power Supplies; 80 PLUS® Silver or better efficiency
- Up to 480 GB total of storage per processor (2 x M.2 SSD)

Processor

Up to 18 Intel® E3-1578Lv5 GT4e processors, each with up to 8GB of Dual Channel DDR4 memory (Excluding Load Balancer subsystem)

Management

1-Click Web GUI platform management; Integrated BMC (iBMC) with advanced options; Support for SNMP and IPMI 2.0; dedicated system manager; and remote management for diagnostics and provisioning

CDN

CDN Hardware sizing is provided in the budgetary proposal.

CATCH-UP TV STORAGE

Catch-Up TV storage sizing is provided in the budgetary proposal.

SPECTAR+ PLATFORM SERVERS

Spectar+ Platform hardware sizing is provided in the budgetary proposal.

TRAINING

TRAINING

After the system installation and configuration, proper education of the operator's technical staff is important step. This will enable you to know both the details about system configuration and solving problems.

Training is organised On-line and consists of several learning modules. Total duration of the training is Three days (4 hours per day).

DAY 1

Spectar+ platform architecture

Ingest & Transcoding

Platform & Monitoring services

Diagnostics & KPI

DAY 2

Multi-Screen Client apps features

Device management system

Customer care & troubleshooting

Analytics

DAY 3

Operator's dashboard – MAM (Linear TV, Radio, VoD) , CMS

Operator's dashboard – EPG Ingest & management

Operator's dashboard – Catch-up TV management

Operator's dashboard – Packages & Offers

Operator's dashboard – Subscribers provisioning

HIGHLIGHTED REFERENCES

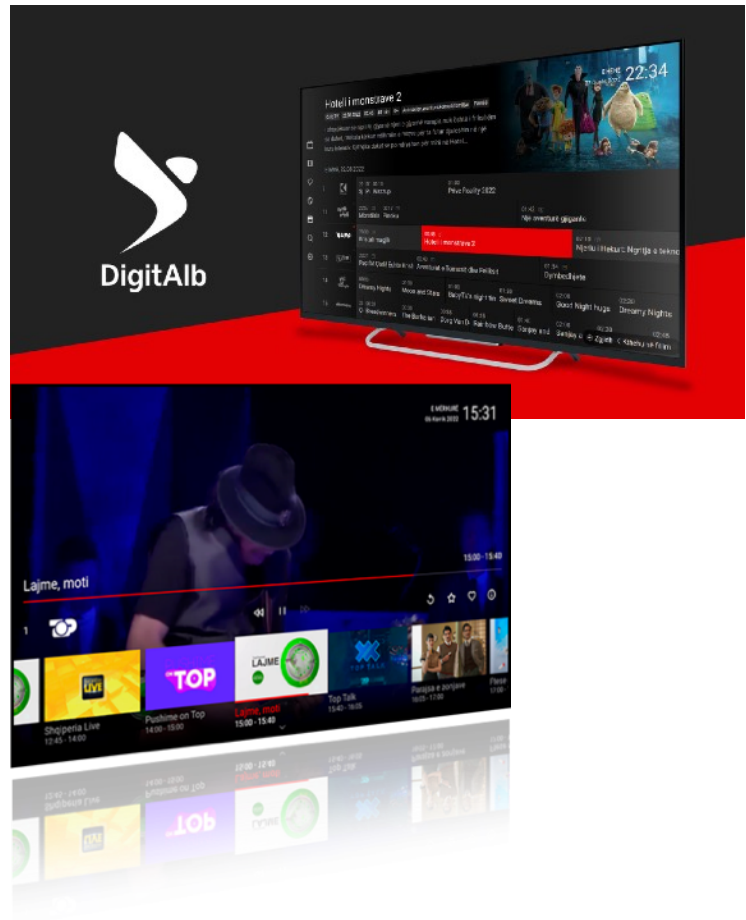

DIGITALB MULTI - SCREEN OTT

DigitAlb is a leading Albanian media, digital satellite and terrestrial TV platform.

DigitAlb OTT is broadcasting over 120 Linear TV channels , including VoD and Catch-Up TV services on Samsung Tizen, LG WebOS, Android TV, Android AOSP STB, PC, Vidaa, Fire TV ,Tablet and Smart phone devices.

More Screens provided DigitAlb with a fully managed End-to-End OTT service including: Back-office, Multi-screen Apps, Digital Rights Management and Content Delivery Network.
