

INFORMATION SECURITY POLICY

With evolving technology and sophisticated methods of system compromise, information security has become essential for businesses across industries, especially in IT. More Screens has decided to implement ISO 27001:2022, the international standard for establishing and upholding an Information Security Management System (ISMS), in order to provide a comprehensive approach to information security across the company. The system is meant to ensure conformity to legal, regulatory, contractual, and business requirements in regard to confidentiality, integrity, and availability of information.

Upholding this ISMS means not only conformity to given requirements but also a commitment to its continual improvement and constant harmonization with other management systems in the company. This is the responsibility of everyone at the company, as defined in the ISMS responsibility matrix. The system is managed by the CISO, who is in charge of the protection of information and associated assets, and in coordination with other top management members plans IS risk management activities and decides on acceptable residual risk levels. The efforts in ISMS communication and coordination are led by designated quality and compliance personnel.
